

# SMA

## STRAPPING MACHINE

With welding or punching unit

SUND  BIRSTA

## Sealings

The SMA can be equipped with different types of strapping heads.

### **SBHX5**

Seals the strap by punching five pairs of seals through the strap

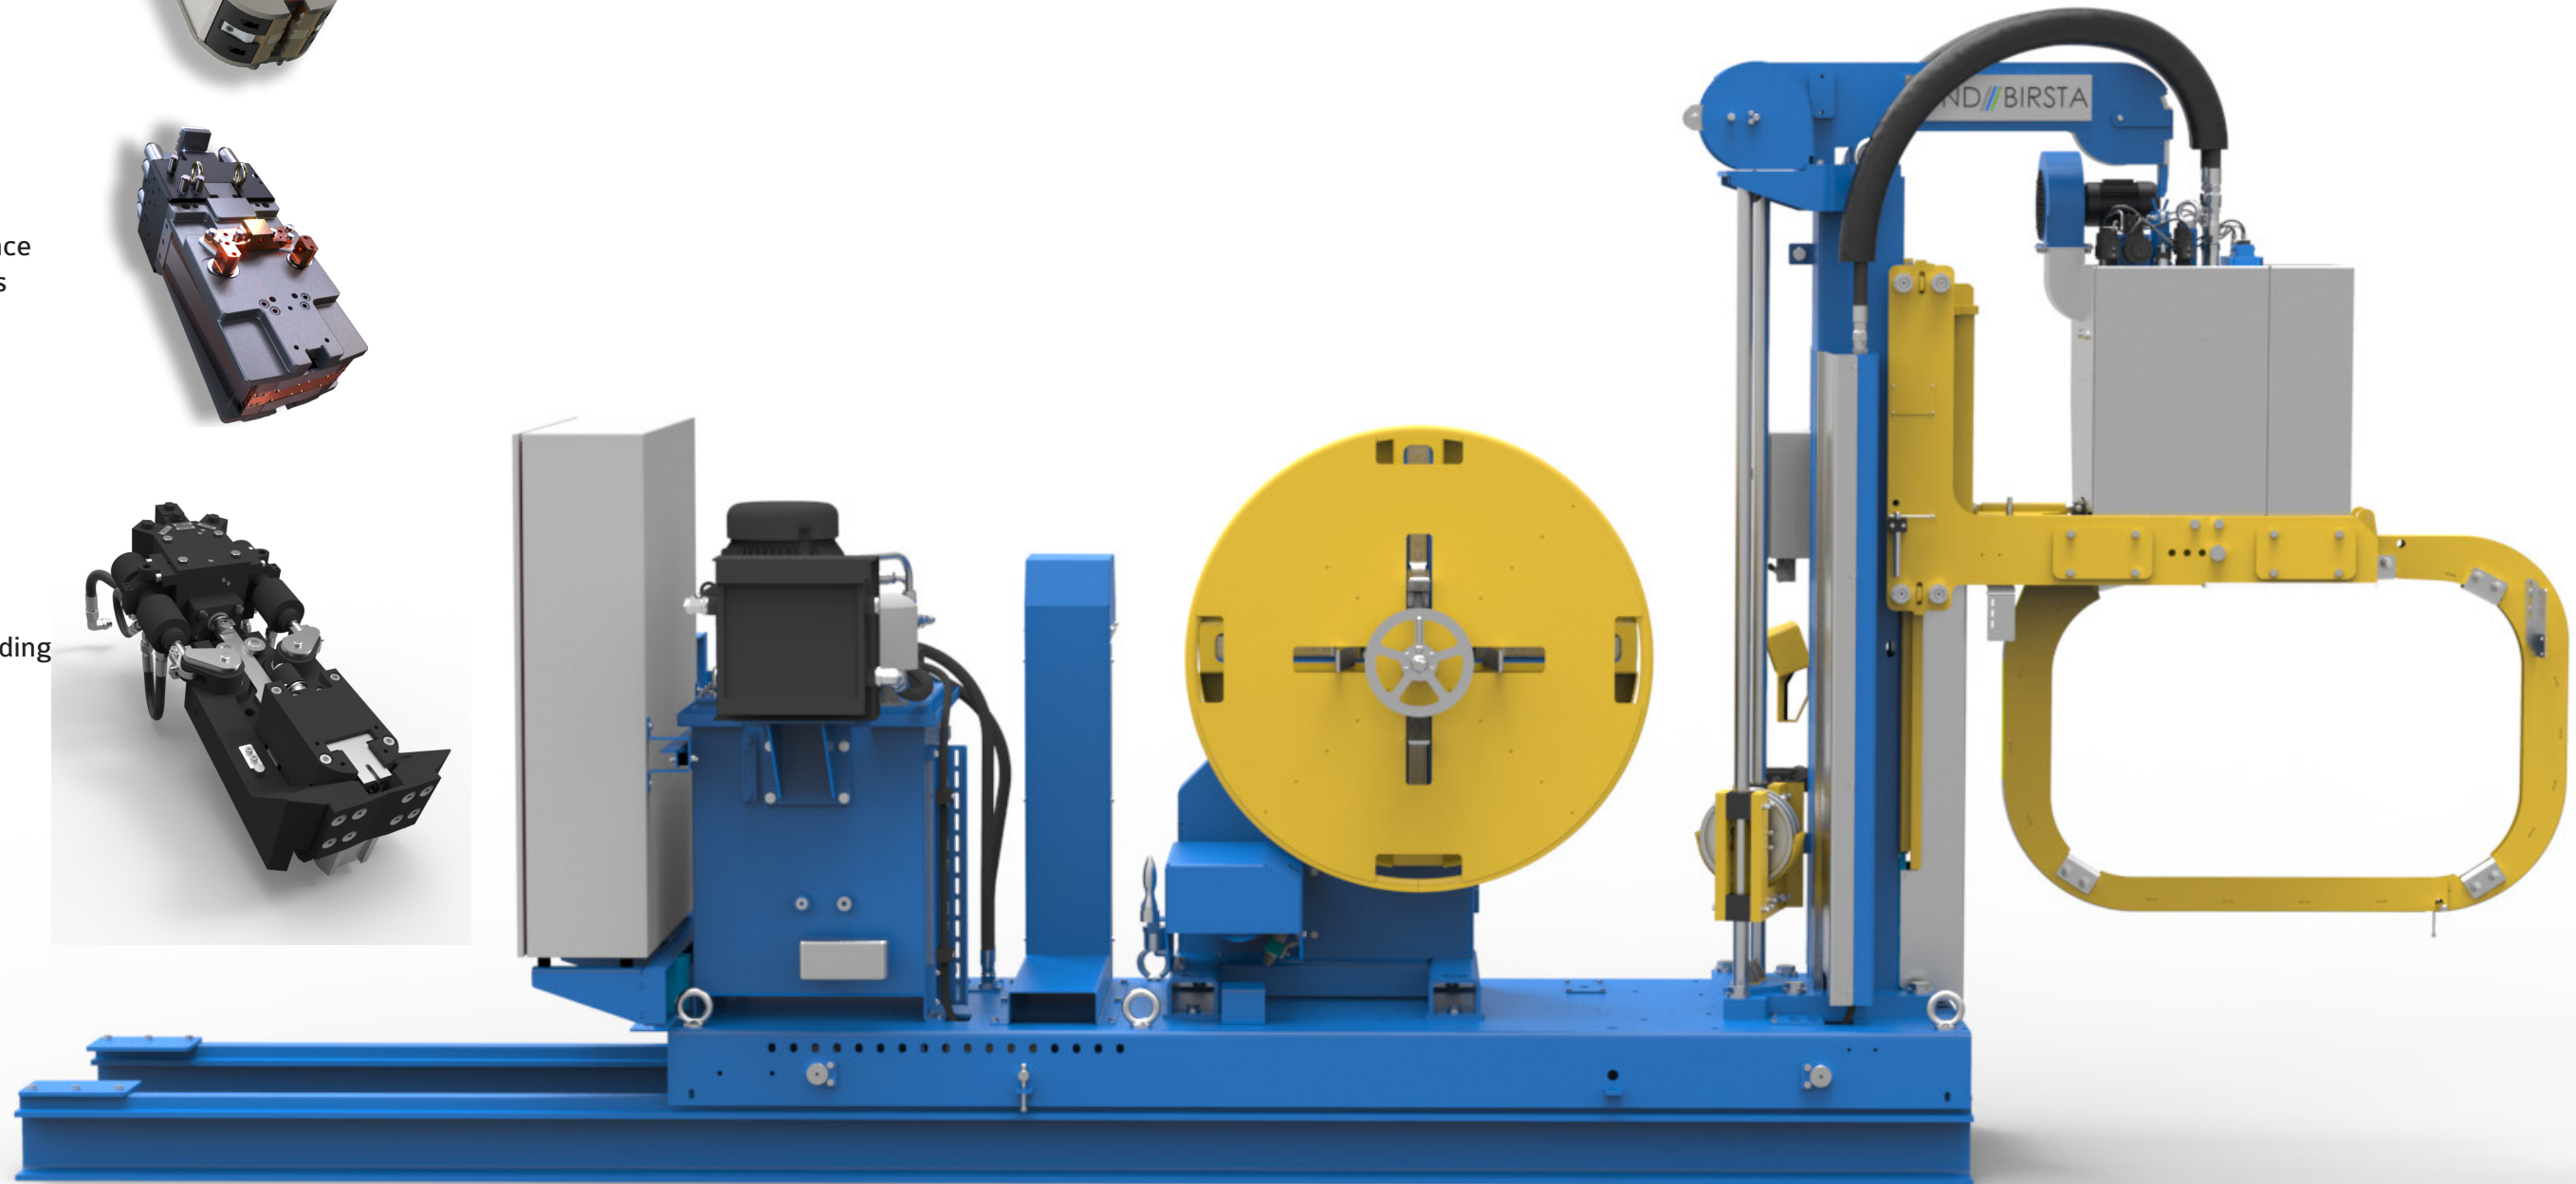

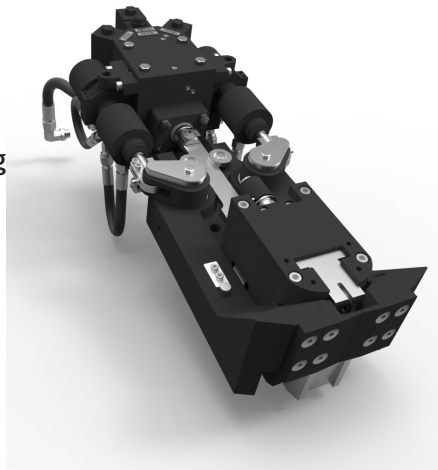

### **SBHRW**

Seals the strap by resistance welding four welding spots

### **SBHW**

Seals the strap by TIG welding welding spots

## Original Design - Proven Technology

The main function of the machine is to strap bundles of square and round profiles. The bundles are transported through the machine by a roller conveyor. When a bundle is in position for strapping the machine starts automatically. As an option the machine can be equipped with a tag marking system. The SMA LL 1000 is a tag marking system that is developed to fulfill the demands from the steel market.

The SMA can be equipped with either the SBHX5 or the SBHRW strapping heads. Both systems has a well proven function and design

## Meeting customer requirements

- Strapping head designed for optimum tightness
- Strong, safe and reliable seals
- High stretching force
- Fully-automatic operation
- Low maintenance requirements
- Easy access for service and maintenance
- High operating availability
