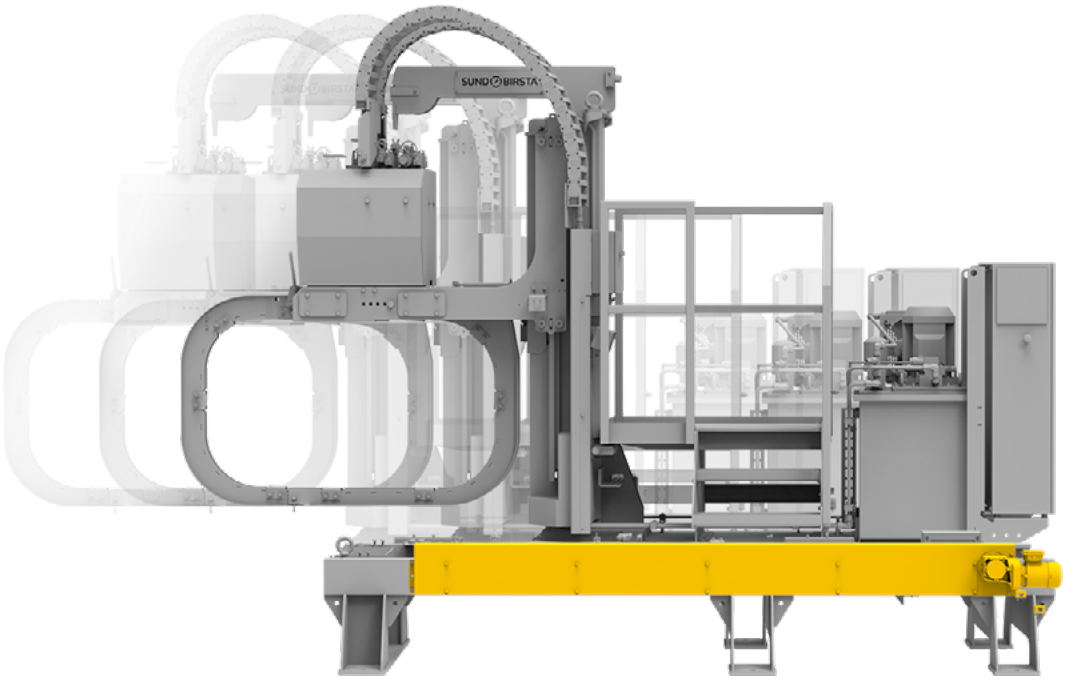
Product sheet

Electrical Drive Unit

The device will move the machine back and forth by a geared motor from the line to the service position.

Improving your productivity

The electrical drive unit will help you to move your Sund Birsta machines in and out of the line where no other movement system is present. It is designed to be a “stand-alone” feature that is simply to install and will not require any programming or major modifications in existing machine, only power supply. This means that it will not compromise existing CE- certification.



Technical specification	Electrical Drive Unit
Power supply	400VAC, 10-16 recommended
Operation	Manual, button left/right, enable button
Movement	Roller chain, actuated by geared motor
Motor	NORD
